

Web Design

Week 1: HTML Fundamentals

Web Design

Web design is the process of planning and creating the visual appearance, layout, and usability of a website. It blends **graphic design** (how it looks) with **user experience** (how it works) to ensure a site is both attractive and easy to navigate.

What is website?

A website is a central location on the internet consisting of several related web pages, all identified by a single domain name.

What is WWW (W3)?

WWW (World Wide Web) is a global collection of digital documents and resources linked by **hyperlinks** and accessed via the internet using a web browser.

How to access website?

What is HTML ?

HTML (HyperText Markup Language) is the standard code used to create the structure of a web page.

HTML

Basic Structure of HTML

```
<!DOCTYPE html>  
<html>  
  <head>  
    <title>My First Website</title>  
  </head>  
  <body>  
    <h1>Hello World!</h1>  
    <p>This is a paragraph of text on  
my new site.</p>  
  </body>  
</html>
```

HTML

Basic Structure of HTML

The Wrapper `<html>`

This tag tells the browser, "Everything inside here is an HTML document." It acts as the container for the entire page.

HTML

Basic Structure of HTML

The Head `<head>`

This is the "brain" of the page. It contains information that doesn't show up on the actual website for visitors to see, such as:

- The Title (what appears on the browser tab).
- Metadata (descriptions for Google search results).
- Links to CSS files (the styling/clothes of the page).

HTML

Basic Structure of HTML

The Body `<body>`

This is the "meat" of the sandwich. Everything inside the body tags is what the user actually see when they visit the site, including:

- Headings `<h1>`, `<h2>`
- Paragraphs `<p>`
- Images `<img>`
- Buttons and Links `<a>`

HTML

Basic Structure of HTML

The Comment Code

It is the part for comment to make paragraph not running or impact on website.

```
<!-- Paragraph/ Code-->
```

HTML

Basic Structure of HTML

```
<!DOCTYPE html>  
<html>  
  <body>  
    <h1>My First Heading</h1>  
    <p>My first paragraph.</p>  
  </body>  
</html>
```

Basic Structure of HTML

HTML Headings

HTML headings are defined with the `<h1>` to `<h6>` tags. `<h1>` defines the most important heading. `<h6>` defines the least important heading.

`<h1>Heading 1</h1>`

`<h2>Heading 2</h2>`

`<h3>Heading 3</h3>`

`<h4>Heading 4</h4>`

`<h5>Heading 5</h5>`

`<h6>Heading 6</h6>`

HTML

Basic Structure of HTML

HTML Paragraphs

The HTML `<p>` element defines a paragraph. A paragraph always starts on a new line, and browsers automatically add some white space (a margin) before and after a paragraph.

```
<p>This is a paragraph.</p>
```

```
<p>This is another paragraph.</p>
```

Basic Structure of HTML

HTML Formatting Elements

Formatting elements were designed to display special types of text:

- `<b>` - Bold text
- `<strong>` - Important text
- `<i>` - Italic text
- `<em>` - Emphasized text
- `<mark>` - Marked text
- `<small>` - Smaller text
- `<del>` - Deleted text
- `<ins>` - Inserted text
- `<sub>` - Subscript text
- `<sup>` - Superscript text

HTML

Basic Structure of HTML

The Favicon & Title

```
<!DOCTYPE html>
<html>
  <head>
    <title>My Page Title</title>
    <link rel="icon" type="image/x-icon"
      href="/images/favicon.png">
  </head>
  <body>
    <h1>This is a Heading</h1>
    <p>This is a paragraph.</p>
  </body>
</html>
```

HTML

Basic Structure of HTML

The Link

The `<a>` tag defines a hyperlink. The `href` attribute specifies the URL of the page the link goes to:

```
<a href="https://google.com">Google</a>
```

HTML

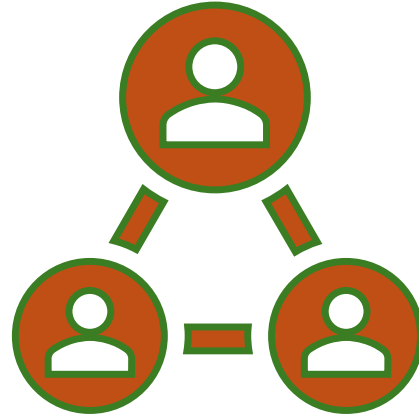

Basic Structure of HTML

The Image Input

The `<img>` tag is used to embed an image in an HTML page. The `src` attribute specifies the path to the image to be displayed:

```

```

Team Activity

In assigned groups, use HTML to create a structured "Brainstorming Website" that outlines a unique project idea. Once completed, your group will present the live site and your code structure to the class.
